PROYECTS

WEATHER APP & MOVIESEARCH APP

Applications made with React (CRA), that shows that I can consume data from an external API and show it on the screen.

MAPS APP

Map application made with React (Vite) using data from the MAPBOX API. The important thing here is that the application can take two points on the map and connect them to each other.

ECOMMERCE TESLO SHOP

Ecommerce App made with React (Next.js), mongo as database, and Docker as container.

PORTFOLIO APP

This application was created to show my future employer how I can contribute to your company and why I am a good option to be working with you.
